b. 105-mm. (sic) QFHE, weighing twenty kilograms per complete round. A trainload of this ammunition was despatched to Altengrabow on 9 July 1948, consisting of twenty-five cars, each holding 200 boxes of five rounds.

c.	122-mm.	QE	(type	of	projectile	unstated)	weighing	twenty-four	kg	per	complete
	round.										

50X1-HUM

- 8. When ammunition of the above three types is unpacked for cleaning, the fuses are red. After cleaning, fuses on the projectiles with a date of manufacture 1944 or 1945 are left red, while fuses on thosedated 1943 are painted black.
- 9. Two rounds only of a new type of ammunition are held at the Altenhain Dump.

 These were brought out, under close watch by sentries, and shown to the officers on the training course.
- 10. The round is described as follows:

Caliber: 105-mm.
Weight: Unknown.
Length of projectile: 28-cm.
Length of cartridge case: 70-cm.
No markings at all, though the type was referred to in conversation as "Model 48".
Normal rimmed base.

The projectile is screwed into the end of the cartridge case, and protrudes two centimeters beyond the case all around at its widest point. No fuse can be seen on the nose. Snatches of conversation about it between Russian officers suggest that itsis a hollow-charge projectile on the "Panzerfaust" model.
